FOR IMMEDIATE RELEASE

AGRELIANT GENETICS HIRES NEW BREEDER TO EXPAND WESTERN RESEARCH PRESENCE

AgReliant Genetics, LLC would like to welcome plant breeder and station manager Phyll Cammack to their Kearney, Nebraska research station as the company continues to expand research and development in the Western regions.

Cammack has experience in research and breeding of pre-commercial corn hybrids in the western areas of the Corn Belt. He has worked diligently to implement new developments in industry testing protocol and will bring a wealth of knowledge to AgReliant Genetics.

“Phyll will have an instant impact on our research team,” said Tom Koch, Vice President of Research at AgReliant Genetics. “His enthusiasm and experience related to corn breeding will ensure continued success of our western breeding program.”

Headquartered in Westfield, Ind., AgReliant Genetics is an innovative seed company committed to delivering high quality seed, providing exceptional service, and creating consistent customer value. Owned as a joint venture between international companies, KWS and Limagrain, AgReliant is ranked as one of the largest field seed companies in the United States.
