

SOYBEANS

ALWAYS ON

Protect your investment every time with AgriShield® seed treatments.

Successful seasons start with quality seed treated to control diseases and insects. AgriShield® seed treatments help soybean plants more effectively take root and fulfill their genetic potential.

Options translate to opportunities.

This combination of three fungicide chemistries protects your seed from major seedborne and soilborne diseases. AgriShield® ST improves root development to increase water and nutrient uptake, driving early growth and performance. Help reduce the risk of replanting by establishing strong stands and protective canopies earlier.

TARGETED DISEASES:

- Early-Season Phytophthora
- Pythium
- Rhizoctonia
- Fusarium
- White Mold or Seedborne Sclerotinia
- Seedborne Phomopsis

This powerful combination of fungicide and insecticide chemistries delivers enhanced plant vigor, as well as protection from a wide variety of above- and below-ground insects, plus defense against major seedborne and soilborne diseases. AgriShield® Plus promotes emergence and helps protect your seed investment.

TARGETED INSECTS:

- Aphid
- Bean Leaf Beetle
- Grape Colaspis
- Leafhopper
- Seedcorn Maggot
- Thrips
- White Grub
- Wireworm

TARGETED DISEASES:

- Early-Season Phytophthora
- Pythium
- Rhizoctonia
- Fusarium
- White Mold or Seedborne Sclerotinia
- Seedborne Phomopsis

This combination of fungicide and insecticide chemistries maximizes enhanced plant vigor, as well as protection from a wide variety of above- and below-ground insects, plus defense against major seedborne and soilborne diseases. AgriShield® Max promotes emergence and protects your seed investment. A 200-plus day inoculant helps to increase nodule development, providing more opportunity for additional nitrogen fixation, which increases the probability of improved yields.

TARGETED INSECTS:

- Aphid
- Bean Leaf Beetle
- Grape Colaspis
- Leafhopper
- Seedcorn Maggot
- Thrips
- White Grub
- Wireworm

TARGETED DISEASES:

- Early-Season Phytophthora
- Pythium
- Rhizoctonia
- Fusarium
- White Mold or Seedborne Sclerotinia
- Seedborne Phomopsis

This treatment enhances your yield potential by maximizing your protection against all major insects and diseases, including two of the most significant contributors to soybean yield losses: sudden death syndrome (SDS) and nematodes. AgriShield® Max combines fungicide, insecticide and an exclusive 200-plus day inoculant that helps increase nodule development, providing more opportunity for additional nitrogen fixation. Adding ILeVO protects the root system of your soybeans against the SDS fungus and provides activity against nematodes.

TARGETED INSECTS:

- Aphid
- Bean Leaf Beetle
- Grape Colaspis
- Leafhopper
- Seedcorn Maggot
- Thrips
- White Grub
- Wireworm
- Multiple Nematode Species

TARGETED DISEASES:

- Early-Season Phytophthora
- Pythium
- Rhizoctonia
- Fusarium
- White Mold or Seedborne Sclerotinia
- Seedborne Phomopsis

Seed protection doesn't get more powerful than this.
